LinkedIn: [Sadir Ahmed Zidan](#) | Address: Nikunja-2, Dhaka, Bangladesh

Passionate Machine Learning enthusiast with almost 2 years of experience developing custom AI models, leveraging pretrained solutions and optimizing performance. Skilled in building agentic LLM applications, robust RAG pipelines, and scalable APIs using Python, TensorFlow, PyTorch, FastAPI and Docker. Proficient in automations, model fine-tuning, and cloud infrastructure, with a proven ability to collaborate cross-functionally, research cutting edge AI technologies, and deliver impactful solutions.

Education

American International University Bangladesh

BSc in Computer Science & Engineering, January 2020 – September 2023
CGPA: 3.77/4.00

Work Experience

Jr. Machine Learning Engineer - Fulltime, Onsite

Nasir Syntax Solution Limited (concern of Nasir Group), January 2024 – Present

- Utilized NLP and LLMs for language tasks, integrating ML solutions for data processing, retrieval and generation, including personalized search engines with vector databases.
- Developed custom models with dynamic loading and optimization, fine tuning for task-specific applications and quantization with LoRA and generation tasks.
- Built efficient RESTful APIs with FastAPI and Docker, implementing traffic handling, error validation, and MLOps practices for scalable deployment.
- Contributed to chatbots with customized Retrieval Augmented Generation (RAG) pipelines, vector databases (FAISS, milvus etc) automations and projects like recommendation systems and object detection-segmentation.

AI Developer - Part time, Remote

GradMate.ai, Apr 2025 – Sep 2025

- Collaborated with the core team to design AI-driven educational tools using LangChain, LLMs via Groq APIs, and scalable FastAPI backends.
- Implemented automation, prompt engineering and performance optimization, integrating with dynamic front-end interfaces in JavaScript.
- Worked with senior developers to extend modular AI infrastructure, ensuring data contracts and retrieval standards with platform teams.

AI Engineer - Contractual, Remote

Ambitionix, May 2025 – Present

- Fine-tuned LLMs for specific tasks.
- Created APIs for deployment.
- Collaborated with cross-functional teams to achieve project goals.

Machine Learning Intern

Nasir Syntax Solution Limited (concern of Nasir Group), October 2023 – December 2023

- Conducted research on personalized recommendation systems, chatbots, and text generation using LLMs and computer vision.
- Scraped and preprocessed data, including tokenization and vectorization, and fine-tuned LLMs for specific applications.

Skills

- **Programming Languages:** Python, R
- **Frameworks & Libraries:** TensorFlow, Keras, LangChain, PyTorch, Fast API, Pandas, Faiss, Llama cpp, ONNX, Ollama, Hugging Face, Streamlit
- **Tools & Platforms:** Docker, MLFlow, Kubernetes, GitHub, VS Code, R Studio, Colab, LoRa
- **Databases:** SQL, MongoDB
- **Operating Systems:** Windows, Linux

Personal Projects

- **Multilingual RAG System for Bengali and English Queries**
A system to process queries in English and Bengali, retrieve relevant information from a PDF document (specifically the HSC26 Bangla 1st Paper book), and generate meaningful answers.
- **Face Mask Detection**
A system to detect facial masks using a cascade classifier. Used a large dataset that varies with different types of poses with masks worn by humans. The model got good accuracy after implementation.
- **Drowsiness Detection**
A real-time system using machine learning algorithms and image processing to detect driver drowsiness. It can continuously monitor the driver while they are driving and provide immediate feedback or alerts.
- **Data Analysis & Prediction**
Analyzed a sleep health lifestyle dataset and applied algorithms to predict health levels as part of a data science project.
- **Predicting Mental Health Condition**
Comparisons between different ML algorithms for predicting mental health conditions, using online data.
- **Sentiment Analysis Chatbot**
This project demonstrates a simple sentiment analysis chatbot that analyzes the user's mood based on their input and provides contextual responses.
